

Turn Around - Diffused Linear Pendant - 1200mm - 3000K - Titanium

Artemide
No. TD32022

Turn Around inverts the approach to the lighting system, starting from the principles of sustainability, reduction, lightness, integration, optoelectronic intelligence, and freedom of application and interaction. It is a combination of different structural and lighting solutions that adapt to the last minute space thanks to its minimal section. It is a composition based on a very small track, with a patented section dictated by the standard thickness of plasterboard, which allows it to fit into the available space in any situation. Different linear, 90-degree angle and curved modules can be combined with electrical and mechanical continuity, offering maximum freedom to create ever-changing shapes. The freedom to design light into space is guaranteed by the flexibility to combine different geometries within the structure and the possibility of integrating different performances. Indeed, the same track can accommodate a linear module for diffused light, as well as sharpening, spot and pendant modules. It is a single 48V-powered continuous energy infrastructure that has no practical limits on length but only on installed power. Turn Around is, moreover, safe thanks to the D.Art technology, designed by Artemide, which overcomes the safety limits of the DALI signal where the same signal is accessible by touch. The DALI signal is transformed into a "SELV" safety extra low voltage ensuring the total safety of the appliances. Turn Around is designed in accordance with international certifications.
